SQUARE COVER DESIGNS

IMPRINTING AND INDENTATION GUIDELINES:

The cover design guide illustrates where imprinting, cut-outs & indentations can appear on a given cover design. ALL designs can be further restricted by material. Always check to ensure you are selecting a cover material that allows for imprinting or indentations if you wish to use those options.

Also, centered cut-outs & indent cover designs are *visually centered*. This means they are slightly bottom weighted (slightly more space at the bottom than the top) and not exact center.

Why can't I do type set imprinting on a stripe?
Simply put, there are too many variables in allowing type set imprinting on a stripe.

IMPRINTING DESCRIPTIONS:

LRC - lower right corner

This means that your type set imprinting will appear in the lower right hand corner of the cover at least 1 inch from the bottom or side edges.

VRC - vertical centered right

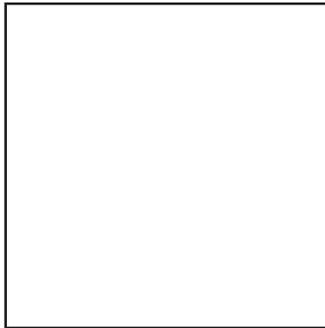

This means that your type set imprinting will appear centered along the right side of the cover. The type will run vertically along the edge of the album at least 1 inch from the cover edge

- All cover designs are subject to change without notice -

SQUARE COVER DESIGNS

All diagrams are approximations and may vary slightly depending on individual album proportions.

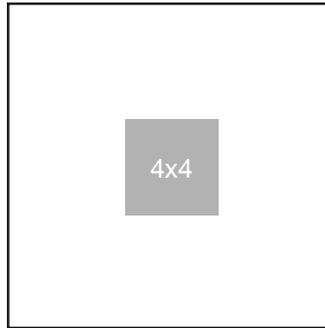

See individual materials for imprint and indentation restrictions.
